CAREER OBJECTIVE

Detail-oriented engineering student specializing in embedded systems and PCB design, proficient in MATLAB and circuit design, seeking to apply technical skills and analytical expertise in a dynamic role at a leading electronics firm.

WORK EXPERIENCE

Technical Content Curation(TCC) • Internship

May 2025 - Aug 2025

Tech Analogy, Virtual

Developed question papers and instructional notes for robotics online classes at MYEQUATION ed-tech company, enhancing the learning experience for students. Gained knowledge of various types of robots and their categories, contributing to a comprehensive curriculum. Trained in advanced PCB design techniques, applying skills in practical projects. Acquired real-life exposure to corporate work environments and effective work handling techniques, improving professional readiness.

Web Development • Internship

Feb 2025

Aadi Foundation, Virtual

Explored innovative methods for creating user-friendly websites, enhancing user experience and accessibility. Acquired proficiency in tools that expedite website development, reducing project timelines. Implemented AI techniques to improve website responsiveness, resulting in a more dynamic user interface.

EDUCATION

B.Tech, Electronics and Communication

2023 - 2027

Sri Vasavi Engineering College

CGPA: 7.32/10

Senior Secondary (XII), BIEAP

2023

Science

SRI CHAITANYA JUNIOR COLLEGE, ELURU

Percentage: 90.50%

Secondary (X), BOARD OF SECONDARY EDUCATION, ANDHRA PRADESH

2021

Ravindra Bharathi School, Gudivada

Percentage: 90.30%

TRAININGS / CERTIFICATIONS

Machine Learning

Dec 2025 - Present

SRI VASAVI ENGINEERING COLLEGE, Pedatadepalli

Learned about types of machine learning models and different classes. Gained knowledge on supervised machine learning models. Built a self-project integrating IoT and machine learning focused on vehicle alert and road safety systems.

Lab View Course

Jul 2025 - Aug 2025

Mytegen Educational Services Pvt.Ltd, Tadepalligudem

Learned about the installation of LabVIEW on PCs. Gained functionality knowledge of LabVIEW and created custom VIs. Worked with LabVIEW and Arduino Uno on projects using over 10 sensors and servo motors. Utilized ThingSpeak to visualize recorded data.

Internet Of Things(IoT)

Oct 2025 - Feb 2026

NPTEL, Virtual

secured 89% in this subject

C-based Vlsi Design

Jul 2025 - Dec 2025

NPTEL, Virtual

Comprehensively designed ICs and antennas. Gained knowledge on Xilinx Vivado for RTL to GDS. Designed various antenna designs for deployment.

IC Design And Fabrication

Jul 2025 - Oct 2025

NPTEL, Virtual

Comprehensively designed ICs and antennas. Gained knowledge on Xilinx Vivado for RTL to GDS. Designed various antennas for deployment.

EMBEDDED SYSTEMS USING ARDUINO

Feb 2025 - Mar 2025

Skilltroniks Technologies Private Limited, Tadepalligudem

Learned the importance and implementation of embedded systems in real-life scenarios. Gained knowledge about various microcontrollers like Arduino, ESP32, I2C, and ARM controllers. Gained hands-on experience on various Arduino projects with sensors like IR, ultrasonic, LDR, and flame detection. Built over twenty projects using Arduino and various sensors.

Python

Sep 2024 - Oct 2024

Sri Vasavi Engineering College Training, Tadepalligudem

VLSI Design Flow: RTL To GDS

Jul 2025 - Oct 2025

NPTEL, Sri Vasavi Engineering College Trainings., Virtual

Learned the design flow stages from specifying requirements to packaging and fabrication. Gained experience with Xilinx Vivado for designing schematics using Verilog. Trained on designing logic at the transistor level.

Full Stack Web Development

Dec 2024 - Present

udemy, Virtual

Learning full stack web development from Udemy by Angela Yu.

PROJECTS

Design_of_Deep_Convolutional_Neural_Network_Architectures_for_Denoising

Jun 2026 - Present

- Designing a deep CNN-based image denoising architecture to remove noise from images while preserving important edges, textures, and structural details.
- Exploring the impact of network depth, convolutional layers, feature extraction, and residual/skip connections on denoising performance.
- Developing an end-to-end pipeline for training CNN models using noisy and clean image pairs.
- Evaluating different architectural configurations using PSNR and SSIM to assess reconstruction quality and structural preservation.
- Investigating the trade-off between denoising accuracy, detail preservation, model complexity, and computational efficiency.

SKILLS

- | | | |
|---------------------------------|--------------------------------|--------------------|
| • English Proficiency (Written) | • English Proficiency (Spoken) | • MS-Office |
| • Java | • Circuit Design | • Bootstrap |
| • CSS | • UI & UX Design | • PCB Design |
| • Arduino | • HTML | • ESP32 |
| • Python | • Data Science | • Machine Learning |
| • ARM Microcontroller | • C Programming | • C++ Programming |
| • Canva | • ChatGPT | • Gemini |
| • Prompt Engineering | | |

EXTRA CURRICULAR ACTIVITIES

- I am an outdoor sports enthusiast and play badminton.
- I have a very good knowledge and experience in designing posters and PPTs using Canva. I have very good web designing skills and am capable of designing well-responsive websites. I have depth knowledge in classes 11 and 12, and I am currently taking crash courses and revision sessions for the board exams.

ADDITIONAL DETAILS

- Achieved distinction in south zone in national mathematics olympiad in 2017
- Served as a literacy secretary in school where I successfully organized many contests.

- Participated in an Embedded Systems workshop by Skilltroniks Technologies and gained practical knowledge on embedded systems. I also competed in the Embedded System Build Race and stood as the runner-up.
- Successfully prototyped a digital speed sensing driver alert system for motorcycles and a real-time riding behavior analysis display completely using ESP and I2C modules.
- Succeeded in optimizing the workflow for developing a novel 8-bit approximate multiplier for better power efficiency and trade-off between output and low power consumption, and the paper is yet to be published.
